COMPANY NEWS

Basin North Drilling Permits Received

On 5th May Bradda Head announced that it had received conditional permission to begin a 10-hole exploration drilling programme at its Basin North claim in Arizona.

Following on from the 2021 drill programme at Basin East, which led to a 65% increase in contained lithium carbonate equivalent, the Company has also planned a 44-hole drilling programme for the remainder of 2022 covering parts of Basin East, Basin East Extension and Basin North claims which will become part of a revised resource estimate towards the end of 2022.

20 holes are planned at Basin East Extension and Basin North, with permits in the process of being obtained at Basin East Extension; both programmes should start in Q2. An additional 14-hole sonic drill programme has also been approved at Basin East.

Maps of our claims and planned drill areas can be found [here](#)

"We are delighted to have received conditional drilling permits at Basin North where evidence from drilling at Basin East and geophysics suggests that the higher-grade Upper Clay layer seen at Basin East could be relatively continuous, and we look forward to evaluating its potential further and following it into our other claims (Basin East Extension and Basin North), where we believe it may also be present. With all the exploration work Bradda has done since its IPO last July, alongside the updated MRE SRK had the confidence to define an upgraded Exploration Target of up to 6Mt of LCE at our Basin Project."

"The increase in LCE at Basin East and assessment of exploration potential is also extremely encouraging and highlights the resource growth potential. The total drilled area at Basin East covers 2.4% of our 47km², which previously only covered just under 2%. That's an increase of 120 kt of LCE over a drilled area increase of 0.2km², and we now have a 6Mt LCE exploration target at the Basin Project."

Charles FitzRoy, CEO

May 2022 site visit

Following the Benchmark Minerals Conference in Toronto CEO Charles FitzRoy took the opportunity to visit the Company's assets once more and scope out future drilling options on the ground. Charles also filmed a video at the Morningstar pegmatite at San Domingo to explain Bradda Head's upcoming drilling programmes. Images are also available in the [Image Library](#) on the website.

121 Mining Investment London

On Monday 23rd May CEO Charles FitzRoy presented the Company to an audience of investors at the 121 Mining Investment Conference in London. Throughout the conference the company also drummed up interest with potential investors in the trademark '1-2-1' meetings
